AVB's relationship with Ascension Borgess has included projects valued at more than \$130 million. We managed the construction of the Stryker Center, the Brain and Spine Institute, and the 950 space parking deck. We have also managed the construction of dozens of other expansions and renovations at the main campus and at numerous satellite locations around the region, including 25 high-end medical equipment replacement installations, five new construction medical labs, successful clinical remodels, and successful medical expansions. Just this year, we completed 50 projects for Borgess; all have taken place on an occupied campus, often with medical treatments taking place literally on the other side of the wall.

Further, AVB's vast experience working with Borgess and within the strict healthcare industry has given us an in-depth working knowledge about healthcare code, protocols, and building standards. AVB's attention to detail, customer service and expertise has allowed us to maintain this relationship for over 20 years and we are proud to continue this long-standing relationship.
