Project Delivery  
Construction Manager

Project Size  
2,500 SF

Use Type  
Healthcare - Renovation &  
Expansion

Owner  
Borgess Medical Center

The endovascular surgery renovation, converted four existing ORs into two state-of-the-art endovascular procedure rooms. Taking place in an occupied campus, AVB was able to insure all other ORs stayed operational throughout the renovation.

Located on the 5<sup>th</sup> floor of the north tower, this proved to be one of the most challenging projects AVB has completed. It consisted of significant infrastructure upgrades to accommodate new imaging equipment. With an extremely aggressive schedule in a high acuity environment, AVB was able to meet all schedule check points on time while maintaining all critical systems. The renovation was completed in June 2012.

AVB's relationship with Borgess Health has included multiple renovation projects. These projects have taken place on occupied campuses, often with medical treatments taking place literally on the other side of the wall.
